Declaration

We hereby declare that this project report, entitled '*A Shared Document Identity for The Shaikh Ayaz University*', is our own work, carried out under the supervision of Dr. A. Supervisor. It has not been submitted, in whole or in part, for any other degree or qualification at this or any other institution. Work by others that is used in it has been acknowledged and cited in the text and listed in the references.

The similarity index of this project report, as reported by the university's plagiarism detection service, is 9%.

Student One

Roll No. 00-CS-001

Student Two

Roll No. 00-CS-002

Student Three

Roll No. 00-CS-003

To the teachers of Shikarpur.

Acknowledgements

We thank our supervisor for guidance throughout this project, the IT Directorate for access to the university's crest and photographs, and our classmates who tested the templates in their own coursework.

Abstract

Documents produced across a university—lecture slides, research posters, official letters, certificates and theses—are often designed separately, and so present the institution inconsistently. This project builds a single document identity for The Shaikh Ayaz University, Shikarpur: a shared brand layer that holds the colours sampled from the university crest, the typefaces and the institutional details, and a family of $\LaTeX$ templates that draw on it. The templates set the university’s name in English, Sindhi and Urdu, meet the WCAG 2.1 contrast requirements for text, and compile with Lua $\LaTeX$, Xe $\LaTeX$ and pdf $\LaTeX$. Matching PowerPoint, Word and Excel templates extend the same identity to colleagues who do not use $\LaTeX$.

Keywords: document design, typography, $\LaTeX$, accessibility, Sindhi, Urdu

Abstract in Urdu

یہ منصوبہ شیخ ایاز یونیورسٹی، شکارپور کے لیے دستاویزات کے مشترکہ سانچوں کا ایک مجموعہ پیش کرتا ہے۔ ان سانچوں میں سلائیڈز، پوسٹر، سرکاری خطوط، اسناد اور مقالے شامل ہیں، جو یونیورسٹی کے نشان، رنگوں اور حروف کو یکساں انداز میں استعمال کرتے ہیں۔ یونیورسٹی کا نام انگریزی، سندھی اور اردو تینوں زبانوں میں درج کیا جاتا ہے۔

Introduction

A university speaks through its documents. A student meets it first in an admission letter, a colleague elsewhere in a conference poster, and an employer in a degree certificate. When each of these is designed separately, the institution appears as several different organisations.

1.1 Problem statement

The Shaikh Ayaz University, Shikarpur, a public sector general university with two faculties and seven degree programmes, had no shared templates for its documents. Departments prepared slides, posters and letters independently, with differing colours, typefaces and renderings of the university's name.

1.2 Objectives

The project set out to:

1. derive a colour palette and typographic system from the university crest;
2. build templates for slides, posters, letters, certificates and theses that share this system by construction, not by copying;
3. set the university's name correctly in Sindhi and Urdu as well as English;
4. keep every text colour legible under WCAG 2.1 [1].

1.3 Scope

The templates target L^AT_EX [2], the standard for technical writing in the sciences, with matching Office templates for colleagues who work in PowerPoint, Word and Excel. Chapter 3 describes the design, Chapter 4 its implementation and Chapter 5 the evaluation.

Background

2.1 Typography and identity

Bringhurst describes typography as the craft of endowing language with a durable visual form [3]. For an institution, that form is part of its identity: the same typefaces, used the same way, make documents recognisably its own.

2.2 T_EX and L^AT_EX

T_EX [4] separates the content of a document from its design. L^AT_EX classes and packages carry the design, so a single change to a class restyles every document built on it. KOMA-Script [5] provides the foundations for the letter and thesis classes, TikZ [6] draws the title pages, and fontspec [7] loads the typefaces.

2.3 Arabic-script names

Sindhi and Urdu are written right to left in the Arabic script, Sindhi usually in Naskh and Urdu in Nastaliq. The templates set Sindhi in Lateef [8] and Urdu in Noto Nastaliq Urdu, both of which are bundled with the templates.

Design

3.1 The crest

The university crest (Figure 3.1) supplies the two primary colours: the maroon of its script and border, and the royal blue of its outer ring.

Figure 3.1 | The university crest, the source of the primary colours.

3.2 Colour and legibility

Definition 3.1 (Contrast ratio). For two colours with relative luminances $L_1 \geq L_2$, the contrast ratio is

$$C = \frac{L_1 + 0.05}{L_2 + 0.05}, \quad (3.1)$$

which runs from 1 (no contrast) to 21 (black on white) [1].

WCAG 2.1 asks for $C \geq 4.5$ for body text and $C \geq 3$ for large text. Table 3.1 lists the palette with each colour's contrast against white, computed with Equation (3.1).

Gold falls below the threshold on white, so the templates use it only for rules and ornaments, or for small capitals on the deep maroon field.

Table 3.1 | The brand palette and its contrast against white.

Colour	Hex	Contrast	Use
Maroon	#6B2A4C	10.2:1	Primary
Deep maroon	#4A1C34	13.9:1	Large fields
Royal blue	#1A1A91	13.1:1	Secondary
Gold	#C39B3E	2.6:1	Rules and accents only
Ink	#231C21	16.7:1	Body text
Slate	#6A626B	5.9:1	Secondary text

Implementation

4.1 A shared brand layer

Every template loads one package, `saus-brand.sty`, which defines the colours, typefaces and identity (Figure 4.1). A change to that file reaches every template.

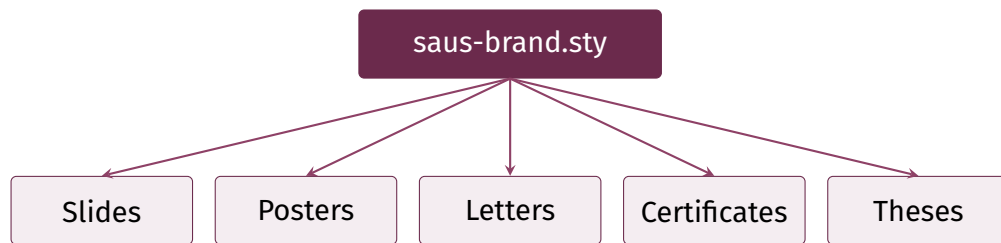

Figure 4.1 | Every template draws on the shared brand layer.

4.2 Using a template

A presentation needs only the theme; the university's details are already built in. Listing 4.1 shows a complete title slide.

Listing 4.1 | A title slide with the SAUS theme.

```

1 \documentclass[aspectratio=169]{beamer}
2 \usetheme{SAUS} % colours, fonts and crest
3 \title{Digital Transformation of Campus Services}
4 \author{Dr. A. Presenter}
5 \begin{document}
6 \begin{frame}[plain]\titlepage\end{frame}
7 \end{document}
  
```

4.3 Engines

Proposition 4.1. *Each template compiles without errors under LuaLaTeX, XeLaTeX and pdfLaTeX.*

LuaLaTeX and XeLaTeX use the OpenType typefaces directly and set Sindhi and Urdu; pdfLaTeX falls back to Type 1 versions of the typefaces and omits the Arabic-script names, as Chapter 5 confirms.

Evaluation

5.1 Compilation

Each template's demonstration file was compiled with all three engines. Table 5.1 summarises the result.

Table 5.1 | Compilation of the demonstration files.

Template	LuaLaTeX	XeLaTeX	pdfLaTeX
Slides	Yes	Yes	Yes ^a
Posters	Yes	Yes	Yes ^a
Letters	Yes	Yes	Yes ^a
Certificates	Yes	Yes	Yes ^a

^a Without the Sindhi and Urdu names.

5.2 Legibility

Every colour used for text reaches a contrast of at least 4.5 against white (Table 3.1), satisfying Definition 3.1 at the level WCAG 2.1 requires for body text.

Conclusion

The project produced a shared document identity for the university and a family of templates that apply it consistently. Because the design lives in one brand layer, future changes—a new typeface, a revised address—need to be made only once. Future work could extend the templates to the university’s website and to forms.

APPENDIX A

Using the templates

The templates, with starter files and full documentation, are in the `latex` folder. Copy the template and its starter file, with `saus-brand.sty` and the `assets` folder, into a new directory and build with `latexmk`.
